

Nottingham eTheses

Sharing graduate theses with researchers
across the world

*"In the culture I grew up in, you did your work
and you did not put your arm around it to stop
other people from looking – you took the earliest
opportunity to make knowledge available."*

Sir James Black,
winner of the Nobel prize for medicine

Nottingham eTheses

Completing a research degree is a major career achievement, one which the University wants you to celebrate with the international research community. Through the eTheses service, you can disseminate and archive a digital copy of your research results making your thesis available for other researchers to view across the world. A growing number of students, particularly in the USA, are taking advantage of online eTheses repositories to gain greater exposure for their work. Electronic dissemination can be a real advantage for a researcher wishing to raise the profile of themselves and their work.

Why use the eTheses service?

- online access makes graduate research results immediately available free of charge to a global audience, speeding up the process of sharing knowledge
- maximum visibility and impact for your work through national and international electronic theses services and search engines; your reputation will increase and your work will be used and referenced by others
- long-term storage and retrieval of your work through an open-access institutional repository
- new collaborations and interdisciplinary links advanced through improved communication

What researchers at Nottingham say:

- “At conferences, I feel that more people have looked at my thesis online who otherwise wouldn’t have gone through the hassle of obtaining a microfilm or hard copy by post.”
- “I really appreciate the ease with which I can access other peoples’ work. PhDs are usually quite tricky to get hold of, which is a shame because they are normally the most thorough reviews on any specific topic available anywhere”.
- “My thesis helped us establish several collaborations with universities and research groups in the UK & Europe”

For more information and details of how to submit an electronic copy of your final, corrected thesis, please see <http://etheses.nottingham.ac.uk>
